

WhenFold

Shortcut handoff / ショートカット引継ぎ

3 rules · 12 logical contexts · 1 behavior changes · platform linux

Coverage / 検証範囲

- Only the supplied ordered rules; unknown built-ins and extensions are outside coverage.
- Contexts are declared logical combinations, not proof they can occur in the editor.
- Commands and arguments are preserved as data. This tool does not execute commands or change settings.
- Default behavior preserves imported bottom-to-top winners. Changed priorities are explicit user choices.
- Source comments and formatting are not preserved. Review before applying the file.
- 単一キー操作・宣言済みコンテキストのみ。未入力の組込み規則、拡張機能、実際の到達可能性は対象外です。

Priority / 優先順位 (highest first)

```
{
  "ctrl+alt+k": [
    "s1:r2",
    "s2:r1",
    "s1:r1"
  ]
}
```

Behavior delta / 動作差分

Command and args changes are counted. Changing source identity without changing command/args is not a behavior change. The machine-readable scenarios retain rule IDs and all unchanged/fall-through contexts.

Shortcut	Logical context	Before	After
ctrl+alt+k	<code>{"whenfold.focus":true,"whenfold.selection":true,"whenfold.lang":"python"}</code>	<pre>demo.selection { "kind": "selection" }</pre>	<pre>demo.python { "kind": "python", "nested": { "preserve": ["a", false, null] } }</pre>

Export source map / 出力元

Export row	Source entry	Chosen rank	Guard
1	s1:r1 Everyday + Python	3	<code>(whenfold.focus && ! (((whenfold.focus && whenfold.lang == 'python') (whenfold.focus && whenfold.selection))))</code>
2	s2:r1 Selection pack	2	<code>((whenfold.focus && whenfold.selection) && ! ((whenfold.focus && whenfold.lang == 'python')))</code>

Export row	Source entry	Chosen rank	Guard
3	s1:r2 Everyday + Python	1	(whenfold.focus && whenfold.lang == 'python')

Files / ファイル

keybindings.json · original-keybindings.json · source-map.json · behavior-delta.csv · scenarios.json · report.html

Generated using the standard Boolean guard: original condition AND NOT the union of higher-priority conditions. Disjointness is by construction; finite exhaustive verification is scoped to the declared model. No novelty or measured productivity claim.
